Summary

I am a postdoctoral researcher in Computational Social Science at Leiden University's Institute of Public Administration, Faculty of Governance and Global Affairs, in the Netherlands. I hold a DPhil (PhD) in Politics from the University of Oxford and previously earned an MA in Political Science and a BA in Public Administration and Government from the Universidad de Chile.

My work bridges the fields of comparative politics and computational social science. I build large-scale text-as-data pipelines, deploy AI and machine learning models, and apply causal inference strategies. My recent peer-reviewed articles have appeared in *Social Science Computer Review*, *Public Opinion Quarterly*, *World Development*, *Artificial Intelligence and Law*, *Government and Opposition*, among others. I regularly present at IPSA, ECPR, EPSA and COMPTEXT.

I am currently working on an NWO-funded project that uses Large Language Models (LLMs) to analyse global investment prospectuses and reveal how governance arrangements shape sustainable finance flows. In parallel, I contribute to COST Action CA22150 on executive-bureaucratic careers and lead the Enlace-Inserción UDP 2025-2026 project "Unpacking the Unpredictable: Using NLP and LLMs to Examine Cabinet Politics and Responses to Stochastic Events in Presidential Democracies," and am a Research Leader at the Oxford Computational Political Science Group (OCPSG).
